Arista Launches its New Mini-ITX-9452 Motherboard with HDTV out, Ideal for a Variety of Computing Applications

*The new mini ITX-9452 motherboard features the Intel® Core Duo/Core Solo Processor,
Dual PCI-E GbE, HDTV output and two independent audio streams*

FREMONT, CA – January 20, 2007 – Arista Corporation, a leading industrial PC solutions provider, introduced today its new industrial ITX-9452 motherboard. Designed to meet the demands for industry reliability, this motherboard is ideal for factory automation processes, medical devices and instrumentation applications. The motherboard is specifically designed for industrial computing applications and its small form factor is ideal for a variety of different chassis.

The new ITX-9452 CPU is well equipped with a Socket 479 Intel® Core Duo/Solo with a 667 MHz FSB. The system memory includes dual channel 240-pin memory slots accommodating up to 2GB of DDR2-400/533 RAM. The motherboard requires a low, 1.58-amp, 5 Volts maximum power and has a programmable watchdog.

Additional system features include integrated Intel 945GM support HDTV-Out, dual 18 channel LVDS and CRT. The motherboard is also equipped with eight USB ports and is compliant with USB 2.0.

“The new ITX-9452 motherboard is ideal for ruggedized applications requiring low power consumption,” said Bernard Casey, VP of Sales at Arista Corporation. “This latest addition to Arista’s product line includes an integrated display, an Intel 945GM supporting HDTV applications with dual 18 channel LVDS and CRT. All of Arista’s motherboards are backed by an optional next day replacement warranty, further ensuring Arista’s commitment to quality and excellence.”

Pricing and Availability

The manufacturers suggested retail price for the ITX-9452 starts at \$380 for North American sales and is available for immediate delivery through Arista’s distribution partners. For volume pricing and additional information call Arista direct at (510) 226-1800 or visit their website at <http://www.aristaipc.com>.
